### Report Overview

Push-rod type pipe inspection cameras are specialized devices designed for the visual inspection and assessment of internal conditions within pipes, conduits, and other narrow or hard-to-reach spaces. These cameras typically consist of a flexible push-rod with a high-resolution camera head attached to one end, which is then manually inserted into the pipe. The camera head is equipped with a light source to illuminate the interior, and it captures images or video that are transmitted back to an operator via a cable or wireless connection. The operator can then view the footage on a screen, allowing for the identification of blockages, cracks, corrosion, or other issues that may affect the integrity of the pipe. These cameras are commonly used in industries such as plumbing, construction, and utility maintenance for non-destructive testing and to guide repairs or cleaning procedures.
