Report Overview

PVC Free Closures are a type of packaging component designed to seal containers, primarily in the food and beverage industry. These closures are made from materials that do not contain polyvinyl chloride (PVC), a widely used plastic known for its durability and flexibility. The decision to use PVC-free closures is often driven by environmental and health concerns, as PVC can potentially leach harmful chemicals into the contents of the container. PVC Free Closures are typically made from alternative materials such as polyethylene (PE), polypropylene (PP), or other non-PVC plastics that are considered safer and more sustainable. They are designed to maintain the integrity and freshness of the product while ensuring consumer safety and adhering to eco-friendly practices. These closures can be found in various forms, such as caps, lids, or seals, and are often used for products like bottled water, soft drinks, and food packaging.
