Report Overview

The QSFP-DD Optical Transceiver is a high-density, high-speed optical module designed for data center and telecommunications applications. It stands for Quad Small Form-Factor Pluggable Double Density, indicating its ability to support four independent high-speed data channels within a compact form factor. This transceiver is an evolution of the QSFP (Quad Small Form-Factor Pluggable) standard, offering double the density by utilizing a two-row design. It supports data rates up to 400Gbps and beyond, making it suitable for applications requiring high bandwidth and low latency. The QSFP-DD transceiver is designed to fit into QSFP-DD cages on network switches, routers, and other equipment, allowing for a significant increase in port density and enabling more efficient use of space in high-performance networking environments. It is typically used for long-haul, high-speed data transmission, and is compatible with various optical interfaces, including LR4, SR4, and FR4, depending on the specific model and application requirements.
