Report Overview

The Quadrupole Mass Spectrometer (MS) is a versatile analytical instrument widely used for identifying and quantifying chemical compounds by separating ions based on their mass-to-charge ratio (m/z). It consists of four parallel rods that generate oscillating electric fields to selectively filter ions, allowing precise detection of molecular and atomic species. Known for its robustness, high sensitivity, and rapid scanning capabilities, quadrupole MS is commonly employed in pharmaceuticals, environmental testing, food safety, and materials science. Its modular design enables coupling with techniques like gas chromatography (GC-MS) or liquid chromatography (LC-MS), enhancing its applicability across diverse industries. While less expensive than high-resolution MS systems, quadrupole MS balances performance and cost, making it a preferred choice for routine and targeted analysis. Growing demand for precise analytical tools in drug development, pollution monitoring, and quality control drives its steady market expansion.
