Abstracts

Respirators protect workers from breathable hazards in the workplace. Fit testing evaluates the seal between a respirator and the face, identifying gaps or leaks that put workers at risk. Fit test results confirm if a mask will provide the right level of on-the-job protection needed. Quantitative fit testing can be used for any type of tight-fitting respirator and involves a machine that is used to measure the amount of leakage into the face piece. In this scenario, the respirator's face piece is attached to a probe that is connected to the machine by a hose.
