### Report Overview

Rabies diagnostic services encompass a range of laboratory tests and clinical evaluations used to detect the presence of the rabies virus in humans and animals, including direct fluorescent antibody (DFA) tests, reverse transcription polymerase chain reaction (RT-PCR), viral isolation, and serological assays. These services are critical for confirming rabies infections, guiding post-exposure prophylaxis (PEP), and supporting public health surveillance efforts. The market is driven by the high fatality rate of rabies, mandatory reporting requirements in many regions, and increasing awareness of zoonotic diseases. Technological advancements, such as rapid point-of-care testing, are shaping the market, while challenges include limited access in low-resource settings and the need for standardized testing protocols.
