Report Overview

Radiopaque Gauze is a specialized type of medical gauze designed to be visible under X-ray imaging, facilitating the tracking and monitoring of its position within the body during surgical procedures. This gauze is typically embedded with radiopaque materials, such as barium sulfate or other heavy metal compounds, which absorb X-rays and create a clear, visible contrast against the surrounding tissues on radiographic images. The product is crucial in various medical applications, including orthopedic, cardiovascular, and general surgeries, where precise placement and monitoring of gauze are essential for patient safety and procedural success. Radiopaque Gauze helps surgeons confirm the correct positioning of the gauze, assess the extent of tissue coverage, and verify the completeness of gauze removal, thereby reducing the risk of complications such as infection or retained surgical materials.
