### Report Overview

Radiopaque Marking Tape is a specialized type of adhesive tape designed for use in medical and surgical applications, particularly in radiographic imaging. It is made from materials that are visible under X-ray or other forms of ionizing radiation, allowing it to be easily identified in medical imaging procedures. This tape is typically used to mark specific areas on a patient's body, such as surgical sites or areas of interest for diagnostic purposes. It is engineered to be thin and flexible to conform to the body's contours, and it adheres well to various surfaces, including skin and medical equipment. The tape is also designed to be non-toxic and hypoallergenic to minimize the risk of adverse reactions. Its radiopaque properties are achieved through the incorporation of dense materials, such as barium sulfate, which are opaque to X-rays and other imaging radiation, ensuring that the tape stands out clearly against the patient's body in the resulting images.
