Abstracts

REACH testing services are a set of laboratory analyses and related technical services that verify whether substances, mixtures and articles comply with the European Union's REACH regulation (Regulation (EC) No 1907/2006 on Registration, Evaluation, Authorisation and Restriction of Chemicals). REACH applies to most chemical substances manufactured in or imported into the EU above one ton per year, with the objective of protecting human health and the environment while ensuring free movement of substances in the internal market. REACH testing typically covers substance identification and physico-chemical characterisation; toxicological and ecotoxicological endpoints required for registration; and targeted analytical testing of products against lists of restricted substances and Substances of Very High Concern (SVHCs), including those in Annex XVII and the Candidate List. For articles and consumer products, REACH testing services focus on screening and confirmation of SVHCs and restricted chemicals (e.g. phthalates, heavy metals, azo dyes, PAHs, formaldehyde) to verify that levels are below regulatory thresholds and to support communication and notification obligations in the supply chain. The REACH testing service market is a specialised sub-segment of the global testing, inspection and certification (TIC) industry, focused on enabling companies to meet the EU's REACH obligations and similar REACH-like frameworks worldwide. The regulation's broad scope covering virtually all chemicals manufactured or imported into the EU above one ton per year, as well as substances in articles, creates recurring demand for registration-related testing, SVHC and restricted-substance screening, and compliance consulting across many sectors, from basic chemicals to complex consumer products. Market-insight reports describe REACH compliance testing as one of the key application areas within the broader regulatory compliance-testing space, alongside RoHS, FDA and other regulations, particularly for packaging, electronics, textiles and consumer goods. The REACH compliance services market is segmented into REACH compliance testing,

chemical safety assessment, product safety reports, risk management and environmental testing, reflecting a trend toward integrated service offerings rather than stand-alone tests. Demand is driven by increasing enforcement (including inspections that find a significant share of shipments non-compliant), growing transparency expectations from brands and consumers, and the spread of REACH-inspired regulations in other regions.

The global REACH Testing Service market size was estimated at USD 675.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global REACH Testing Service market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
