Report Overview

The Ready-To-Use Therapeutic Food (RUTF) and Lipid-based Nutrient Supplement (LNS) market primarily serves vulnerable populations, particularly children under five suffering from severe acute malnutrition (SAM) or moderate acute malnutrition (MAM). RUTF, a high-energy, micronutrient-enriched paste made from peanuts, oil, sugar, milk powder, and vitamins, is designed for outpatient treatment without cooking, while LNS, a lipid-based paste or powder fortified with essential nutrients, is used for both prevention and treatment of malnutrition. These products are critical in humanitarian crises and food-insecure regions, distributed through aid programs, governments, and NGOs. At the same time, their formulation ensures rapid weight gain and nutritional recovery, making them indispensable in global malnutrition interventions. The market is driven by rising malnutrition rates, increasing humanitarian aid, and advancements in product innovation, though challenges such as supply chain disruptions, cost constraints, and regulatory hurdles persist. Additionally, growing public-private partnerships and local manufacturing initiatives are expanding accessibility, particularly in Africa and South Asia where malnutrition burdens are highest.
