Report Overview

A Real-time 3D Intracardiac Ultrasound Catheter is a sophisticated medical device designed for use in cardiac procedures. It is an elongated, flexible catheter equipped with a high-frequency ultrasound transducer at its tip, which allows for the real-time acquisition and visualization of 3D images of the heart's interior. This technology enables physicians to navigate within the heart chambers, assess cardiac structures, and guide interventions with precision. The catheter is typically inserted through a vein or artery and advanced to the heart under fluoroscopic guidance. Its 3D imaging capabilities provide a comprehensive view of the heart's anatomy, facilitating the diagnosis of various cardiac conditions and the planning and execution of therapeutic procedures such as ablations, valve repairs, or structural heart interventions. The device's real-time imaging feature is crucial for dynamic procedures, offering immediate feedback and ensuring the safety and efficacy of the intervention.
