Abstracts

A receipt scanner app is a mobile software application that enables users to digitize paper receipts through smartphone camera capture or digital file upload, then automatically extracts and organizes key financial information using artificial intelligence and optical character recognition (OCR) technology. The app instantly identifies and records essential receipt details including merchant name, transaction date, total amount, tax information, and payment method, eliminating manual data entry. After processing, the app securely stores digital receipts in an organized, searchable format while allowing users to categorize expenses, generate reports, and export data for accounting or tax purposes. Designed for both personal finance management and business expense tracking, receipt scanner apps simplify financial record-keeping, reduce lost receipts, provide spending insights, and streamline tax preparation and reimbursement workflows. The Receipt Scanner App industry is witnessing clear trends of AI-OCR Technology Upgrade (with enhanced recognition accuracy for handwritten, blurry, or multi-language receipts), Deep Integration with Financial Ecosystems, and Diversified User Demand Segmentation (personal users focus on simple expense categorization, while business users require batch processing and reimbursement workflow management), alongside steady market scale growth driven by global digital finance penetration; opportunities lie in the strong demand for digital expense management from small and medium-sized enterprises (SMEs) amid their digital transformation, the rising awareness of personal financial management, policy-driven popularization of electronic invoices, and the potential in emerging markets with growing cross-border consumption; however, the industry also faces prominent challenges, including Data Security and Compliance Risks (needing to meet strict regulations like GDPR for financial information protection), Technical Bottlenecks (difficulty in 100% accurate recognition of non-standard receipts), Intense Market Competition, and User Habit Barriers (some traditional users still rely on paper receipt storage and are resistant

to digital tools).

The global Receipt Scanner App market size was estimated at USD 1024.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
