ROSA is the other component in the transceiver. The ROSA is responsible for receiving the optical signal transmitted by the TOSA of the opposite end's transceiver and converting it back to an electrical signal so that the communication equipment can understand it. The Receiver optical sub assembly consists of a photodiode, a housing and the electrical interface. The Photodiode receives the optical signal, the housing provides the metal or plastic cover and the electrical interface connects to the communication equipment. The ROSA is also an essential component of every fiber optic transceiver. A pair of TOSA and ROSA combined together forms the optical transceiver. The ROSA may also contain amplifier to enhance the received signal.

The global Receiver Optical Subassembly Rosa market size was estimated at USD 850.36 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.45% during the forecast period.
