Report Overview

Receptive Cell is a term used in biology and neuroscience to describe a specialized cell that is capable of receiving and processing signals from other cells. In the context of the nervous system, a receptive cell typically refers to a neuron or a sensory receptor that can detect and interpret external stimuli, such as light, sound, or touch. These cells play a crucial role in the transmission of information within the body, as they convert sensory input into electrical signals that can be transmitted to the brain for further processing and interpretation. The term "receptive" highlights the cell's ability to be responsive to external inputs, making it a key component in the complex network of communication within living organisms.
