Report Overview

A Reciprocating Seal is a specialized type of sealing device designed to prevent fluid leakage in reciprocating motion applications, such as hydraulic cylinders, pumps, and compressors. It is engineered to accommodate the linear back-and-forth movement of a shaft or piston within a cylinder or housing, while maintaining a tight seal to prevent fluid escape or contamination. The seal's design typically includes a sealing element made from materials like rubber, polyurethane, or PTFE, which is capable of withstanding high pressures and maintaining its sealing properties under varying conditions.
