Report Overview

Recombinant Human Coagulation Factor VIII for Injection is a biotechnological pharmaceutical product designed to treat patients with Hemophilia A, a genetic bleeding disorder characterized by a deficiency of clotting factor VIII. This product is produced through recombinant DNA technology, which involves inserting the gene encoding for human factor VIII into a host organism, such as yeast or mammalian cells, to enable the production of the factor VIII protein. The recombinant factor VIII is then purified, formulated, and packaged for injection. It serves as a replacement therapy, providing the missing clotting factor to help control and prevent bleeding episodes in individuals with Hemophilia A. The product is administered intravenously and is subject to strict quality control measures to ensure safety and efficacy.
