### Report Overview

Recombinant humanized collagen lyophilized fiber is a bioengineered material derived from recombinant DNA technology, designed to mimic the structural and functional properties of natural human collagen. This advanced biomaterial is primarily used in medical and cosmetic applications, including wound healing, tissue regeneration, and dermal fillers, due to its biocompatibility, biodegradability, and ability to promote cell proliferation. Unlike animal-derived collagen, it minimizes immunogenic risks and offers consistent quality, making it suitable for precision medical treatments and aesthetic procedures. The lyophilized (freeze-dried) form enhances stability, prolongs shelf life, and allows for easy reconstitution, ensuring versatility in clinical and research settings. Its adoption is driven by the growing demand for minimally invasive therapies and the shift toward synthetic alternatives in regenerative medicine.
