Report Overview

Recombinant Proteinase K is a genetically engineered enzyme derived from the microorganism *Engyodontium album*, also known as *Tritirachium album*. This enzyme is a serine protease, which means it cleaves peptide bonds in proteins at the carboxyl side of basic amino acid residues such as lysine and arginine. Proteinase K is widely used in molecular biology and biotechnology for the digestion of proteins, particularly in applications such as DNA purification, where it helps to break down cellular proteins to isolate DNA. It is also utilized in the preparation of samples for electrophoresis and in various immunological assays. The recombinant form of Proteinase K offers advantages such as higher purity, consistency in activity, and the ability to produce it in large quantities, making it a preferred choice in many research and diagnostic applications.

In 2024, the global Recombinant Proteinase K market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
