Report Overview

Reflective foil, also known as radiant barrier foil, is a specialized material designed to reflect radiant heat, typically made from aluminum or metallized polyester layers laminated to substrates like plastic films or kraft paper. It is widely used in construction (e.g., insulation for roofs, walls, and attics), automotive applications (e.g., heat shields), and packaging (e.g., thermal liners for food and pharmaceuticals) to improve energy efficiency by reducing heat transfer. The market is driven by growing demand for energy-efficient building solutions, stringent building codes promoting sustainability, and increasing adoption in emerging industries like electric vehicle thermal management.
