Abstracts

Products in the Logical Output Reflective Optical Sensor family consist of light emitters and photosensitive elements (usually phototransistors) that are adjacent to each other and mounted in the same direction to ensure that the light emitted by the transmitter can be detected by the sensor elements in the device when it is reflected by an object in the sensor field of view. This type of logical output sensor generates a binary (bimodal) signal based on whether the optical signal received by the photoelectric sensor exceeds a specified threshold.

The global Reflective Logical Output Optical Sensor market size was estimated at USD 215.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
