Report Overview

Refrigerant Gel Packs are temperature-regulating products designed to maintain optimal temperature levels for various applications. These gel packs are typically made from a mixture of water and a gelling agent, which provides a semi-solid, flexible consistency. They are specifically engineered to absorb and retain cold or heat, depending on their intended use. When placed in a freezer, these gel packs absorb cold temperatures, and when removed, they slowly release the stored cold to cool down items. Conversely, when heated, they can retain warmth for a prolonged period. Refrigerant Gel Packs are commonly used in food and beverage transportation to keep items chilled, in medical settings for temperature-sensitive products, and in personal care for therapeutic applications such as cold therapy or heat therapy. Their portability, reusability, and ability to maintain a consistent temperature make them a versatile solution for temperature regulation across different industries.
