Report Overview

Release agents for rubber mandrels are specialized chemical formulations applied to the surface of mandrels (molds or cores) to prevent rubber compounds from adhering during the molding or curing process. These agents ensure easy demolding, reduce defects, and extend the lifespan of mandrels by minimizing wear and tear. Typically composed of silicone-based, water-based, or solvent-based solutions, they must exhibit high thermal stability, non-reactivity with rubber compounds, and uniform surface coverage. The product is critical in industries like automotive, aerospace, and industrial rubber manufacturing, where precision and efficiency in molding processes are paramount. Demand is driven by the growth in rubber product applications, advancements in release agent formulations, and the need for eco-friendly, low-VOC alternatives.
