Abstracts

A remote access penetration test service is a type of security testing that assesses the vulnerabilities of a company's remote access infrastructure. This could include virtual private networks (VPNs), remote desktop services, or other remote access solutions. The purpose of the test is to identify weaknesses in the system that could be exploited by attackers to gain unauthorized access to the network. The test typically involves simulating an attack by a skilled hacker and attempting to exploit any vulnerabilities found. The results of the test can then be used to improve the network's security posture and reduce the risk of a successful attack.
