Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Renewable Diesel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Renewable diesel is a non-ester, hydrocarbon-based liquid fuel made by chemically hydrotreating renewable biomass feedstock (grease). Market Concentration and Key Players: Internationally, renewable diesel market concentration is relatively high, mainly concentrated in developed countries such as Europe, America and Japan. For example, large manufacturers such as Neste, Nni and Ampol; from the domestic point of view, renewable diesel still has a lot of room for development. Manufacturing Processes and Market Trends: The production process of renewable diesel oil mainly adopts hydrotreatment technology, which deoxidizes, cracks and isomerizes waste grease, vegetable oil and other raw materials at high temperature and high pressure to generate hydrocarbon fuels with similar chemical structure to fossil diesel oil. The core steps include raw material pretreatment, catalytic hydrodeoxygenation, isomerization and fractional purification, in which nickel based catalysts gradually replace noble metal catalysts as the mainstream choice due to their low cost and high catalytic efficiency. Compared with biodiesel produced by traditional transesterification method, the renewable diesel produced by this process does not contain oxygen, can be directly compatible with existing diesel engines and infrastructure, and has a cetane number of up to 70-90, which burns cleaner. In terms of market trends, global demand is growing rapidly. As one of the core markets, China has made remarkable policy promotion efforts. The 14th Five-Year Plan for Renewable Energy Development proposes an annual output of 10 million tons by 2025, and supports the development of the industry through financial subsidies and technological breakthrough plans. Applications expanded from transportation to aviation and industrial

fuels, with heavy trucks and ships becoming major growth points. However, fluctuations in raw material supply and high production costs are still the main challenges. In the future, technology will break through in the direction of diversification of raw materials, intelligent process and cost reduction of the whole industry chain.

The global Renewable Diesel market size was estimated at USD 1344.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Renewable Diesel market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
