Report Overview

Resettable PPTC Devices, also known as Polymeric Positive Temperature Coefficient Devices, are advanced electronic components designed to provide overcurrent and overtemperature protection in various electronic circuits and systems. These devices consist of a polymer composite material that exhibits a positive temperature coefficient (PTC) effect, meaning their electrical resistance increases significantly when exposed to excessive temperature or current. When the abnormal conditions are removed, the device automatically resets, returning to its original low-resistance state. This self-resetting feature allows for continuous protection without the need for manual intervention or component replacement. Resettable PPTC Devices are widely used in applications such as battery protection, motor and power supply protection, and surge protection in consumer electronics, automotive systems, and industrial equipment, ensuring safety and reliability in electrical systems.
