## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Residential Space Heater competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A residential space heater is a small electric heating device used to locally or overall raise the indoor temperature. It is widely used in residential scenarios where heating is insufficient in winter, there is no centralized heating, or temporary heating is required. In 2024, global Residential Space Heater production reached approximately 72,640 k units, with an average global market price of around US\$ 50 per unit. The production capacity of Residential Space Heater reaches 90,800 k units, and the industry's gross profit margin is approximately between 25% and 40%. The residential space heater market is driven by a combination of factors: Firstly, the increasing frequency of extreme winter weather events in many parts of the world and the inadequate insulation of older buildings have led to a continuous rise in consumer demand for auxiliary heating equipment. Secondly, urbanization and the increase in smaller apartments have expanded the application scenarios for diverse products such as portable heaters, electric heaters, convection heaters, and baseboard heaters. Meanwhile, the upgrading of residents' consumption has led to a preference for heating products with higher comfort and aesthetics. Features such as quiet operation, constant temperature, intelligent timer, and remote control via mobile phone have become key differentiators for new products. Furthermore, the development of online retail channels, social media promotion, and cross-border e-commerce has significantly expanded brand reach, accelerated the entry of new brands and product upgrades, and collectively propelled the domestic space heater market towards high efficiency, intelligence, energy saving, and market segmentation.

The global Residential Space Heater market size was estimated at USD 3632.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
