Report Overview

Resin-impregnated cloth, also known as prepreg, is a composite material consisting of fabric (such as fiberglass, carbon fiber, or aramid) pre-coated with a thermosetting resin (epoxy, phenolic, or polyester). The resin remains in a partially cured state, allowing for easy handling and storage until final curing under heat and pressure, which results in a high-strength, lightweight, and durable material. It is widely used in industries such as aerospace, automotive, marine, and electronics for applications requiring structural reinforcement, corrosion resistance, and thermal insulation. The material's versatility, combined with its ability to be molded into complex shapes, makes it a preferred choice for high-performance components like aircraft panels, circuit boards, and automotive body parts. Its growing adoption is driven by demand for lightweight, fuel-efficient materials and advancements in resin formulations that enhance mechanical properties and processing efficiency.
