## Abstracts

The type of retail electronic article surveillance electronic tags (also known as EAS tags) can vary depending on the specific technology used. Some common types include: Radio Frequency (RF) tags: These are the most widely used type of EAS tag and work by emitting a radio signal that is picked up by EAS antennas at the store entrance/exit. RF tags can be either disposable or reusable and come in various sizes and shapes. Acousto-Magnetic (AM) tags: These tags use a combination of magnetic and acoustic technology to create a unique signal that is detected by EAS antennas. AM tags are often used for high-end merchandise and can be either disposable or reusable. Electro-Magnetic (EM) tags: These tags use a magnetic field to create a unique signal that is detected by EAS antennas. EM tags are typically smaller and less expensive than RF or AM tags, but they also have a shorter detection range. Overall, the type of EAS tag used will depend on the specific needs of the retailer, including the type of merchandise being protected, the store layout, and budget considerations.

The global Retail Electronic Article Surveillance Electronic Tags market size was estimated at USD 908.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.40% during the forecast period.
