Report Overview

A retractable syringe is a medical device designed to administer medication or extract fluids in a safe and controlled manner. It features a hollow needle attached to a plunger within a cylindrical barrel, which can be moved forward or backward to draw up or dispense the liquid. The key characteristic of a retractable syringe is its safety mechanism, which automatically retracts the needle into a protective sheath after use, minimizing the risk of needlestick injuries and accidental exposure to bodily fluids. This design not only enhances the safety of healthcare professionals and patients but also helps in the proper disposal of used needles, reducing the risk of contamination and infection. Retractable syringes are commonly used in various medical settings, including hospitals, clinics, and at home for self-administration of medications.
