Report Overview

Reusable Cup Electrodes are specialized medical devices designed for electrotherapy applications, particularly in the field of physical therapy and rehabilitation. These electrodes are typically shaped like cups and are made from non-conductive, flexible materials such as silicone or latex-free rubber. They are designed to be filled with an electrolyte solution, which facilitates the transfer of electrical current from the device to the patient's skin. The cups are reusable, meaning they can be cleaned and sterilized after each use, making them cost-effective and environmentally friendly compared to single-use alternatives. Reusable Cup Electrodes are often used in treatments such as iontophoresis, where medication is delivered through the skin, or in electrotherapy for pain management and muscle stimulation. Their design allows for a secure and comfortable fit, ensuring consistent contact with the skin throughout the treatment session.
