## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Reusable Hot and Cold Gel Pack competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global reusable hot and cold gel pack production reached approximately 371 million units, with an average global market price of around US\$ 3.6/unit. Reusable hot and cold gel pack ? a flexible pouch or semi-rigid refrigerant element filled with a non-toxic phase-change gel or super-absorbent polymer formulation that can be repeatedly frozen for cold therapy or heated (microwave/boiling/wet-heat) for heat therapy. Designed to remain flexible at low temperatures, maintain thermal mass (heat capacity), and be mechanically robust (puncture/seal resistant) for multiple reuse cycles. The reusable hot and cold gel pack market has expanded steadily in recent years, driven by the increasing adoption of home-care applications, rising demand for sports rehabilitation, and layered growth in pharmaceutical and food cold chains. On the consumer side, household and athletic recovery use cases have fueled frequent replacement cycles and bulk purchases of lower-cost SKUs; on the medical side, there is stable demand for CE/FDA-compliant, medical-grade products where material safety, thermal performance and sanitizability are prioritized. Meanwhile, last-mile refrigeration needs from food and fresh-produce e-commerce have promoted the use of more durable cold-chain gel packs and rigid gel bricks, resulting in a multi-tiered product and price structure. Competition spans specialist medical consumables manufacturers, cold-chain packaging providers, and numerous OEM/ODM factories. Key product differentiation lies in phase-change temperature tuning (critical for vaccines and refrigerated pharmaceuticals), outer membrane and seal durability, and the availability of compostable/drain-safe eco-formulations. Over the next three to five years, driven by stricter food-contact and

recyclability regulations and rising demand for reusable, qualifiable passive refrigerants in pharma logistics, the market is expected to evolve toward higher-performance, more compliant, and greener alternatives.

The global Reusable Hot and Cold Gel Pack market size was estimated at USD 1335.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
