### Report Overview

Reusable Loop Electrodes are medical devices primarily utilized in the field of electrophysiology, specifically for cardiac ablation procedures. These electrodes are designed to be used multiple times, unlike their single-use counterparts, which can help reduce waste and lower costs in healthcare settings. They are typically composed of a flexible, insulated wire with a looped tip made from a conductive material, such as platinum-iridium alloy. The loop design allows for precise navigation and manipulation within the heart chambers, enabling effective tissue contact and energy delivery for the purpose of ablating or modifying abnormal electrical pathways that cause arrhythmias. Reusable Loop Electrodes are sterilized and reconditioned after each use, adhering to strict safety and performance standards to ensure their reliability and efficacy in subsequent procedures.
