### Report Overview

Reverse Treated Copper Foil (RTCF) is a specialized type of copper foil used in the manufacturing of lithium-ion batteries. It is characterized by its reverse-side treatment, which involves applying a specific coating or treatment to the side of the copper foil that is opposite to the side that comes into contact with the battery's anode. This treatment enhances the foil's performance by improving adhesion to the active material, reducing the risk of delamination, and potentially increasing the conductivity and durability of the battery. RTCF is crucial for the stability and longevity of lithium-ion batteries, particularly in high-drain applications where performance and safety are paramount. The reverse treatment can also contribute to better cycle life and energy density of the batteries, making RTCF an essential component in the advancement of battery technology.
