Report Overview

RFID Cold Chain Management is a comprehensive system designed to monitor and maintain the temperature and integrity of perishable goods throughout their transportation and storage process. This technology utilizes Radio Frequency Identification (RFID) tags to track and record temperature data in real-time, ensuring that products such as food, pharmaceuticals, and other temperature-sensitive items remain within their optimal temperature range. The system includes RFID readers placed at various checkpoints along the supply chain, which communicate with the tags to gather temperature data. This information is then transmitted to a central database, allowing for continuous monitoring and alerting in case of deviations from the set temperature parameters. The primary objective of RFID Cold Chain Management is to enhance product quality, reduce waste due to spoilage, and improve overall operational efficiency by providing accurate and timely temperature tracking.
