Report Overview

A Rice Polishing Wheel is a specialized industrial component designed for the processing of rice grains in the milling and refining stages of rice production. This wheel is typically composed of a rotating abrasive surface that removes the outer husk and bran layers of paddy rice, resulting in polished, white rice. The wheel's design may vary, but it often features a series of abrasive ridges or grooves that facilitate the removal of the husk while minimizing the loss of the rice kernel's nutritional endosperm.
