Report Overview

A Ridge Ventilator is a specialized roofing accessory designed to enhance the ventilation of a building's attic space. It is typically installed along the ridge of a roof, which is the peak where two sloping roof surfaces meet. The primary function of a Ridge Ventilator is to facilitate proper air circulation, which helps in reducing heat build-up and moisture levels within the attic. This is crucial for maintaining the longevity of the roof and the overall structure of the building. The Ridge Ventilator works in conjunction with soffit vents, which are installed at the eaves or the lower edge of the roof, to create a balanced intake and exhaust system. This system allows hot air and moisture to escape from the attic, while preventing rainwater and debris from entering. Ridge Ventilators are often made from durable materials such as metal or plastic and are designed to withstand various weather conditions, ensuring long-term performance and reliability.
