### Report Overview

Ridge ventilators are passive ventilation systems installed along the ridge of a sloped roof, designed to allow warm, moist air to escape while drawing in cooler air through soffit vents, creating a continuous airflow that regulates attic temperature and moisture levels. They are typically made from durable materials like plastic, aluminum, or steel, and come in various designs, including baffled or mesh-covered models to prevent debris and pests from entering while maintaining optimal ventilation efficiency. These systems are essential for preventing heat buildup, reducing energy costs, extending roof lifespan, and mitigating issues like mold and ice dams in colder climates. Their installation is common in residential, commercial, and industrial buildings, particularly in regions with significant temperature fluctuations or high humidity. The market for ridge ventilators is influenced by construction trends, energy efficiency regulations, and increasing awareness of the long-term benefits of proper attic ventilation.
