A riding zero-turn mower is a mower that allows the operator to ride on the equipment and has a zero turning radius design. In 2024, global Riding Zero-Turn Mower production reached approximately 743 k units, with an average global market price of around US\$ 4500 per unit. The growth of the riding zero-turn mower market is primarily driven by the continued rise in demand for efficient and precise lawn care in medium- to large-scale residential yards and commercial landscaping projects, a growing consumer preference for time- and labor-saving mechanized solutions, and the trend toward electrification driven by advances in lithium-ion battery technology.
