Report Overview

A Ripple Control Receiver is a device used in electrical systems to receive signals sent by a utility company to control the operation of specific loads or equipment. These signals are typically sent over the power lines using a technique known as ripple control. Ripple control allows utilities to remotely manage electricity usage by sending coded signals through the power grid. These signals can instruct devices such as hot water heaters, air conditioners, or other large loads to turn on or off at specific times. This method is often used for load management, demand response, or other grid stabilization purposes.
