Abstracts

Road Maintenance Software is an intelligent software system for monitoring, maintaining, and managing road infrastructure. By integrating sensor technology, data analysis, and intelligent scheduling, it collects and analyzes real-time data on road conditions, traffic flow, and weather conditions. Its core functions include road condition monitoring, maintenance planning, resource allocation, and maintenance record management. It helps road maintenance personnel promptly identify and resolve road problems, optimize maintenance plans, and rationally allocate human, material, and financial resources. This improves the efficiency and quality of road maintenance, extends road life, and ensures safe and unobstructed traffic. It also provides data reporting and statistical analysis, providing decision makers with accurate road condition assessments and forecasts, facilitating informed decision-making. With the continuous increase in infrastructure investment, especially in emerging economies, there is a growing demand for efficient road asset management and maintenance, which promotes the development of road maintenance software. The deterioration of existing road assets has forced relevant organizations to adopt advanced software solutions to effectively maintain and renovate roads, so as to ensure road safety and service life. The software can optimize maintenance activities, reasonably allocate resources, reduce costs, and improve asset performance, which has a strong attraction for transportation departments and road maintenance enterprises. With the development of technology, road maintenance software will be more integrated with emerging technologies such as the Internet of Things, artificial intelligence and big data. For example, through the Internet of Things, real-time monitoring of road conditions can be realized, and artificial intelligence can be used for predictive maintenance, so as to improve the intelligence and efficiency of road maintenance. At the same time, with the promotion of smart city projects, road maintenance software will also be more closely integrated with urban overall management systems, providing more comprehensive

urban road management solutions.

The global Road Maintenance Software market size was estimated at USD 1281.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
