Abstracts

A Road?rail Tractor is a dual-mode vehicle which can operate both on rail tracks and a conventional road. They are also called hi-rail, from highway and railway, or variations such as high-rail, HiRail, Hy-rail, etc. They are often converted road vehicles, keeping their normal wheels with rubber tires, but fitted with additional flanged steel wheels for running on rails. Propulsion is typically through the conventional tires, the flanged wheels being free-rolling; the rail wheels are raised and lowered as needed. Purpose-built road?rail vehicles also exist. Fluids and filters need to be changed on a regular basis in a diesel tractor. This type of maintenance is far less necessary for battery-powered terminal tractors. Depending on where the service facility is located, it might be possible to use the battery electric tractor without having to worry about licensing or other issues. BEVs are integrated with regenerative braking feature, This feature replaces the typical service brakes, this brake system offer better life to braking system compared to their diesel equivalents.
