Robotic-Assisted Total Knee Arthroplasty (RATKA) is an advanced surgical technique that incorporates robotic technology to enhance the precision and accuracy of total knee replacement procedures. During RATKA, a robotic system assists the orthopedic surgeon in planning and executing the surgery with greater control and customization. The process involves preoperative imaging to create a 3D model of the patient's knee, allowing for precise planning. During the surgery, the robotic system guides the surgeon in positioning the implants with optimal alignment and balance. This technology aims to improve the overall outcomes of knee arthroplasty by minimizing errors, enhancing implant placement, and potentially reducing recovery time and postoperative complications. RATKA represents a significant advancement in orthopedic surgery, offering a more personalized and technologically assisted approach to total knee replacement.

The global Robotic Assisted Total Knee Arthroplasty market size was estimated at USD 4520.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.85% during the forecast period.
