Abstracts

Robotic palletizers and de-palletizers are automated systems used in industrial settings to handle the loading and unloading of products onto and from pallets. **Robotic Palletizers:** These machines automatically arrange products, such as boxes, bottles, or other items, onto a pallet in a structured, efficient manner. They help in streamlining the process of stacking goods for transportation or storage, increasing efficiency, and reducing the need for manual labor. **Robotic De-Palletizers:** These robots perform the reverse operation, unloading products from pallets. They are commonly used in warehouses, manufacturing plants, and distribution centers where products need to be unpacked from their pallets for further processing, sorting, or storage. Both systems enhance productivity, minimize human errors, reduce physical strain on workers, and optimize space utilization. They are widely adopted in industries such as food and beverage, pharmaceuticals, and logistics.
