Report Overview

A Rod-pin Horizontal Sand Mill is an industrial grinding equipment designed for the efficient dispersion and milling of various materials, such as pigments, fillers, and other solid particles, in liquid media. This machine features a horizontal cylindrical grinding chamber, which houses a series of grinding media, typically in the form of rod-shaped pins. The chamber is equipped with a high-speed agitator or rotor that rotates at a rapid pace, creating a turbulent flow within the chamber. This action causes the rod pins to collide with the material being processed, resulting in the breakdown of particle agglomerates and the dispersion of the solid particles throughout the liquid medium. The horizontal design of the sand mill allows for a more uniform distribution of energy, leading to a more consistent and finer grinding result. This type of mill is commonly used in the paint, coating, ink, and pharmaceutical industries for the production of high-quality, homogeneous products.
