### Report Overview

A Rogowski Coil Current Probe is a non-contact, electromagnetic device used for measuring alternating current (AC) or direct current (DC) in a conductor. It consists of a flexible coil of wire wound around a ferromagnetic core, which is designed to detect the magnetic field generated by the current flowing through the conductor. The probe operates by inducing a voltage in the coil proportional to the rate of change of the magnetic field, which is directly related to the current in the conductor. This method of measurement offers several advantages, such as the ability to measure current in high-voltage environments without the need for a direct connection, and the flexibility to measure current in hard-to-reach or moving conductors. The Rogowski Coil Current Probe is widely used in various industries, including power distribution, electrical testing, and industrial automation, for applications like energy monitoring, fault detection, and system protection.
