Report Overview

A Roller Lever Valve is a type of manual control valve used in fluid control systems to regulate the flow of various liquids or gases. It is characterized by its roller mechanism, which allows for precise control and smooth operation. The valve consists of a lever handle that, when turned, moves a roller along a cam path, which in turn adjusts the position of the valve's disc or plug. This movement controls the opening and closing of the valve ports, thereby regulating the flow rate. Roller Lever Valves are known for their durability, ease of operation, and ability to handle high pressures and temperatures, making them suitable for a wide range of industrial applications, including water treatment, chemical processing, and HVAC systems. They are designed to provide a reliable and efficient means of flow control, ensuring that the fluid flow is managed effectively and safely.
