Report Overview

Rolling shutters are window or door coverings consisting of horizontal slats hinged together, typically made from aluminum, steel, or PVC, designed to provide security, insulation, noise reduction, and light control. They operate via a rolling mechanism, either manual or motorized, allowing users to raise or lower them as needed. These shutters are widely used in residential, commercial, and industrial settings due to their durability, weather resistance, and ability to enhance building security by acting as a physical barrier against break-ins.
