Report Overview

Roof ridge vents are passive ventilation systems installed along the peak of a sloped roof, allowing hot, moist air to escape from the attic while drawing in cooler air through soffit or eave vents. They are designed to improve airflow, regulate temperature, and prevent moisture buildup, which can lead to mold, wood rot, and reduced energy efficiency. Typically made from durable materials like aluminum or plastic, ridge vents blend seamlessly with roofing materials for an unobtrusive appearance. Their effectiveness depends on proper installation and compatibility with the roof's design, making them a preferred choice for homeowners and builders seeking long-term, low-maintenance attic ventilation solutions. The market for ridge vents is driven by increasing awareness of energy efficiency, stricter building codes, and the growing demand for sustainable home improvement solutions.
