Report Overview

A Rotating Electric Gripper is an advanced robotic end-effector designed for precise and versatile handling of objects in various industrial applications. This device combines the functionalities of a traditional electric gripper with an additional rotation mechanism, allowing for a 360-degree rotation of the gripped object. It is typically equipped with servo motors that enable both the opening and closing of the gripper as well as the rotation of the gripper's axis. The product is characterized by its ability to handle a wide range of tasks, such as sorting, assembly, and packaging, with high accuracy and repeatability. The rotating feature enhances its utility in applications where the orientation of the object is critical, such as in the automotive, electronics, or food processing industries. The electric gripper is controlled through a user interface that allows for customization of grip force, speed, and rotation angle, making it adaptable to different sizes and shapes of objects.
