### Report Overview

Rough Lab Grown Diamonds refer to the uncut, unpolished, and unfaceted diamonds that are cultivated in a laboratory setting rather than being mined from the earth. These diamonds are created through advanced scientific processes that simulate the natural conditions under which diamonds form. Despite being lab-grown, they possess the same chemical, physical, and optical properties as their earth-mined counterparts. The term "rough" indicates that these diamonds are in their raw state, having not yet undergone the cutting and polishing process that transforms them into the sparkling gems commonly associated with jewelry. Rough lab grown diamonds are valued for their sustainability, ethical sourcing, and often lower cost compared to natural diamonds, making them an attractive option for those seeking an eco-friendly and budget-conscious alternative for diamond jewelry.
